

1200 KM'S FOR KIDS

ARMIDALE HOSPITAL

BROSELOW PAEDIATRIC RESUSCITATION CART: \$4,550 1 needed
HOSPITALS - Armidale Hospital, Child & Adolescent Unit

This resuscitation cart improves the management of paediatric patients for easier and quick access when selecting medical equipment in an emergency situation. The colour coded drawers indicate the child's age for an accurate selection and appropriate sized equipment.

GLEN INNES HOSPITAL

JAUNDICE METER: \$10,000 1 needed
HOSPITAL - Glenn Innes Hospital, Maternity Ward

In the past, to determine the level of jaundice, a blood sample was obtained by pricking the baby's heel. With this device it is possible to significantly reduce the number of painful blood samples carried out on the baby by measuring the jaundice level through the skin instead. It provides accurate and instant results helping to prevent brain damage.

- **T.B.A** Broselow Resuscitation Cart not approved waiting on feedback from Glen Innes requestor Lynn Shands if they will consider a Broselow Pack.
- **T.B.A** Vital Signs Monitor as per Medical Sub Committee asked if they would consider a Propaq Monitor instead, waiting on feedback from requestor Lynn Shands. Last correspondence with Lynn Shands today 14/8/12

MUSWELLBROOK HOSPITAL

CONNEX VITAL SIGNS MONITOR: \$5,600 2 needed
HOSPITAL - Muswellbrook Hospital, Paediatric Ward

This piece of equipment allows monitoring of vital signs in the paediatric setting. It will allow for prompt identification of the child needing further treatment or referral. It will be designated to the paediatric ward and will enable accurate assessment of vital signs to improve clinical outcomes.

TAMWORTH HOSPITAL

GLIDESCOPE BATON: \$6,700 1 needed

HOSPITAL - Tamworth Rural Referral Hospital, Emergency Department

This vital piece of equipment is used when doctors are faced with the problem of difficult intubation, the challenge of placing a breathing tube in the correct position and placing a child onto life support. The paediatric glidescope baton will assist the specially trained doctors in emergency to ensure the correct tube placement giving the child the highest chances of survival.

- Waiting on Medical Sub Committee to approve this item.

WARWICK HOSPITAL

JAUNDICE METER: \$10,000 1 needed

HOSPITALS – Warwick Hospital, Children’s Ward (QLD)

In the past, to determine the level of jaundice, a blood sample was obtained by pricking the baby’s heel. With this device it is possible to significantly reduce the number of painful blood samples carried out on the baby by measuring the jaundice level through the skin instead. It provides accurate and instant results helping to prevent brain damage.

THE CHILDREN’S HOSPITAL AT WESTMEAD
